ECHO TWIN

12 1/2 inches
27 inches
18 1/2 inches

YOU WILL BE THRILLED WITH THE VERSATILITY OF THE AMPEG ECHO TWIN, a sound-rounded reverb amplifier, actually two complete amps in a single cabinet. Once available only in high-priced studio recording equipment, a real echo chamber effect is now within easy reach of the "portable musician." The commanding concert hall sound, contrasted with straight amplification, is overwhelming. "Extra-full," "rich," "dimensional," "opulent," are among the colorful adjectives people use to describe a sound that can be appreciated only by a personal audition. An improved tremolo is incorporated in the ECHO TWIN, and can be used in combination, if desired, with reverb. An especially compelling effect is obtained by tuning the twin tremolos in and out of unison. When used without echo you have a full, clean 30 watts of power at your disposal. When used with echo you operate one of the 15 watt amplifiers for the main signal and one for delay signal. Intended for guitars and accordions, of course, but wait till you hear what it does for piano and voice!
