

**MODEL SJ-12R**

**OWNER'S GUIDE**

*Thank you for selecting the Ampeg Classic SuperJet guitar amplifier. Inspired by the classic Ampeg guitar amps of the sixties, this easy-to-use amplifier represents Ampeg's quest to provide you the finest instrument amplification systems available. In order to get the most out of your new amplifier, please read these instructions before its use.*

### **THE FRONT PANEL:**

**1. Guitar Input** accepts a standard 1/4" instrument plug from your electric guitar. This input is at 0dB level.

**2. Accordion Input** accepts a standard 1/4" instrument plug from high output electronic instruments. This input is padded 6dB to compensate for higher output sources.

**3. Volume** controls the overall output level of the amplifier. At lower volume settings the sound will be clean. As you push the volume higher and crank your guitar the sound becomes distorted.

**4. Treble** adjusts the output level of the high frequency and offers a cut or boost of 12dB at 6kHz.

**5. Mid** adjusts the output level of the middle frequency and offers a cut or boost of 16dB at 800Hz.

**6. Bass** adjusts the output level of the low frequencies and offers a cut or boost of 24dB at 50Hz.

**7. Reverb-Dimension** controls the amount of reverberation applied to the signal. With the control at the "0" position there is no reverb applied; as the control is

turned towards "10" the amount of reverb increases accordingly.

**8. Power light** indicates the amplifier is turned on by glowing an iridescent blue color.

**9. Power switch** is used to turn the amplifier on and off.

### **THE REAR PANEL:**

**10. Power cord** connects the amplifier to a suitable source of A.C. voltage. This is a grounded, three-wire cord and must be connected to a properly grounded outlet. **DO NOT attempt to defeat the ground connection of the power cord!** If your amp was purchased outside of the United States, see the sticker next to the A.C. connector for its power ratings. Follow the above guidelines.

**11,12. Power Tubes:** EL34 / 6CA7 (2)

**13. Power Amp Phase Splitter Tube:** 12AX7A / 7025 (1)

**14. Preamp Tube:** 12AX7A / 7025 (1)

Replace tubes **ONLY** with same types! Refer to enclosed publication about Tubes and Tube Amplifiers for additional information.

**15: Footswitch Jack** is located up inside the amplifier, just past the cabinet's covered back panel. Connect the supplied footswitch here for control of the Reverb on/off and a switchable 15dB of gain from 250Hz to 8kHz.

The SJ-12R is covered with a durable Tolex material: wipe it clean with a lint-free cloth. Never spray cleaning agents onto the cabinet. Avoid abrasive cleansers which would damage the finish.

*El SJ-12R esta cubierto con un material durable Tolex: limpielo con una toalla seca. Nunca rocíe el gabinete con sustancias limpiadoras. Evite usar materiales abrasivos con los cuales pueda danar el acabado.*

*Le SJ-12R est couvert avec «Tolex» un revêtement noir et durable. Essuyez cette matière avec une toile propre et sans charpie. Ne pulvérisiez jamais les agents de nettoyage sur l'appareil. Evitez les nettoyeurs abrasifs qui peuvent endommager le «Tolex.»*
