Micro VR Impedance

Question: I own one of your 1x15 cabs. I wanted to know if I can hook up the Micro VR head to this without issue. I believe the cab is rated at 8 ohm and the head is 4 ohm.

Answer: The head is actually rated for a MINIMUM of 4 ohms, meaning you can run an 8 ohm cab, two 8 ohm cabs, one 4 ohm cab, a 16 ohm cab, two 16 ohm cabs, etc., etc.

The 8 ohm cab will work fine.
