## Using the SVT-3Pro outside of North America

---

**Question: I'm considering buying an Ampeg SVT-3Pro in the United States and bringing it back with me to my country, where we have a different AC voltage than the 120 volts used in the United States. Can I safely use this amp in my country without damaging it?**

**Answer:** You would need to use an external step-up or step-down transformer that converts your country's voltage to 120V AC.
