SVT-4Pro with 2 ohm load

Question: Can I run two 4 ohm cabinets with my SVT-4Pro?

Answer: Yes. Both power amps of the SVT-4Pro can handle a load down to 2 ohms, so you can run one 4 ohm cabinet from each power amp (recommended), or two 4 ohm cabinets on one power amp. You should NOT, however, run a 2 ohm load from the Mono-bridge output, as that is only rated for a 4 ohm load.
